# Kitchen Trends

The Possibilities are Endless!

## *Kitchen Renovations*

Well-done kitchen renovations add more than monetary value to homes at resale. They are some of the most popular home improvement projects with homeowners because they allow for unmatched creativity in high-traffic rooms. If you're considering a kitchen makeover, consider these seven trends in kitchen design before breaking out your demolition tools.

*Stop Dreaming,  
Start Living!*

## *Open Spaces Are In The Zone*

Open spaces that incorporate kitchen, living, and dining areas are still trending in professional kitchen design planning. However, zoning offers a new twist to 2020's large, open-space kitchen designs. Open spaces are now subtly partitioned with luxe furnishings, decorative screens, and even substantial house plants to create intimate settings for cooking, eating, and conversing.

## *Open Shelving Replaces Upper Cabinets*

The right kitchen cabinets can make or break a smart renovation project. A current trend is using beautiful lower cabinets and replacing uppers with open shelving. Open shelves give homeowners the chance to personalize the space with their favorite artwork or heirloom china.

## *Project Financing Simplified*

*Financing options to meet your project needs.*

### *Key benefits\*:*

- *Fast, and secure application process*
- *Low monthly payment options*
- *Flexible terms from 12 months to 12 years*
- *Expanded credit lines up to \$100k*

## *Islands Are the New Dining*

When compartmentalized kitchen, dining, and living spaces are combined into one large room, your design options are endless. Installing a large island in the kitchen is one trend that's holding its own in 2020. These new islands double as dining tables and feature clean-lined, elegant designs.

A popular option is a single-level island with space for chairs or stools. The height of this type of island should be level with your kitchen's lower cabinets. When it comes to island countertop materials, the look is luxe and showy in 2020. Marble island countertops are making a comeback as the material of choice in high-end kitchens. If your budget is a little more limited, there's nothing wrong with selecting a quartz look alike.

## Look Up For New Treatments

While your kitchen's wall color, cabinets, and backsplash get lots of attention, the room's ceiling is a source of untapped design inspiration. Let us create upscale architectural detail by installing coffered ceilings that help make the space unique. Exposed beam ceilings also add interest to lackluster kitchens. You can paint real-wood or faux-wood beams to match the rest of your ceiling or leave them a natural wood color.

## Pantry Organization

Today's households are all about doing more with less. Many homeowners made New Year's resolutions to have zero-waste kitchens. Installing custom pantry organization systems helps them to reach their goals and conduct more efficient kitchen operations. These pantry systems have open shelves, pull-out drawers, and other space-saving features.

## Wood-ish Flooring

Wood flooring that extends throughout the home unifies your kitchen with the rest of your home's rooms. While this look is quite popular for its seamless designer appearance, most homeowners are wary of putting expensive hardwood floors in their kitchens. After all, tile is durable enough to handle food messes and spills, and it's often cheaper to install than hardwood. With modern flooring options, homeowners don't have to sacrifice the look that they want for the resilience that they need. You can get tile that looks like plank wood flooring.
